Dear East Ferris Township,

I would like council to review the water level of lake Nosbonsing, as my crop fields are getting flooded. This farmland has been owned since 1912 (lot 19, con 3).

I have contacted the MNR previously thought out the years, they've proposed I contact the municipality of East Ferris to assess the currant situation on this matter. The high water level. This has been an issue, for many years. Do to the high water levels the crops haven't been yielding their proper volume. This has caused some shortage in crops.

I would like to have some information on why the current lake water level is at this current height?

Gilles L Perron
